The AI-native home heating group: six local brands, one operating system

We own the customer, the price and the data. Work is delivered by regional partner installers **and our own operating arm, Dang It's Hot**, which runs installation, sourcing and training so we know every part of the chain first-hand. Central agents run marketing, sales, design, scheduling, procurement, grants and finance for every brand, so **launching a region is a configuration, not a company**, and SG&A stays nearly flat as volume grows.

125k
UK heat pumps sold 2025, **+27% YoY** (record)
Heat Pump Association

450k/yr
Govt 2030 install goal: needs **~33% CAGR**
Warm Homes Plan; HPA

£2.7bn
BUS grants to 2029/30: **£295m → £709m p.a.**

GOV.UK BUS notice

60k+
MCS-certified installs 2025 from a **fragmented SME base**
MCS

1 WHY NOW

- **Demand is grant-funded and compounding.** BUS budget rises 2.4× to 2030, and air-to-air opened up in Apr 2026. No brand owns that category yet.
- **Supply is fragmented.** Installers are good engineers but weak marketers, and they lose capacity to surveys, admin and grant paperwork.
- **The buying journey leaks.** Slow surveys, opaque quotes, grant forms, no-shows.
- **Incumbent SG&A scales linearly** with surveyors, sales, schedulers and back office.
- **National reach alone doesn't win.** British Gas (7,000+ engineers) rides its energy customer base. Safestyle's national branches failed in 2023 under fixed cost and CAC.
- **Wedge: air-to-air heating + cooling.** It's simpler and more standardisable than air-to-water, so it's the right product to prove the machine on.

Positioning: consumers buy heat pumps and home heating, with cooling as the upsell. The corporate ambition is home electrification: solar, batteries and EV charging on the same OS later.

2 ANALOGUES: EACH PIECE EXISTS

COMPANY	PROVES	GAP WE FILL
BOXT	Online quote-to-install; 100k+ homes; Brookfield £20m (2022)	One national brand; boilers
Heatable	Central selling, distributed delivery	No local trust
Heat Geek	Installer network to one technical standard	Doesn't own demand
HomeServe	Recurring plans + engineers; £4.1bn to Brookfield	Not install-native
Apex, Wrench (US HVAC)	Local brands kept, one central back office	M&A roll-up; we build
Vet / dental groups	Local name, central SG&A + procurement	Same logic, new category
Neighborly	Multi-brand home services, shared infrastructure	Franchised, not owned
Octopus	Own installers, training academy and heat pumps; OS spun out as Kraken	Energy-retail led, one brand
Amazon	Own logistics and 1P beside 3P partners: learns their costs, sets the bar	Same playbook, for installs

Subcontracting is common; our edge isn't. It's agentic depth, installer productivity and near-zero marginal cost per new brand or territory.

3 THE MODEL

NewCo: one legal operating company
Capital · risk · insurance · supplier contracts · finance · MCS / BUS compliance

Agentic commercial engine
Marketing, CRM, instant quotes, finance, grants, support

Agentic delivery engine
Design, job packs, scheduling, procurement, QA, payouts

▼ one back end, six regional front ends ▼

London & Home Cos.	South/SW Bristol	Midlands B'ham	N. West M'chester	Yorks/NE Leeds	Scotland Glasgow

▼ fulfilment: partner and owned, side by side ▼

Regional partner-installer networks · vetted · MCS route · rate-carded · scored

Dang It's Hot: our own operating arm

Fulfilment	Sourcing	Training
In-house install crews	Kit procurement & supply	Installer academy

Why we also operate: to learn each trade from inside, speak our partners' language, benchmark their costs, and make in-sourcing a switch, not a rebuild, wherever owned wins.

LAYER	WE OWN	DRIVES
Demand	Brands, ads, SEO, lead scoring	CAC
Transaction	Design, quote, contract, grant	Margin
Fulfilment	Matching, kit, scheduling, QA, own crews	Cost, quality
Lifecycle	Warranty, service plans, referrals	LTV

4 WHY SIX REGIONAL BRANDS

- **Local trust converts:** word of mouth, installs on your street, local reviews.
- **Sharper targeting** by regional housing stock, demographics and competitors.
- **Six parallel experiments;** winning propositions roll out group-wide.
- **Contained brand risk;** near-zero launch cost on one OS.

TERRITORY	HUB	LEAD HYPOTHESIS
London & Home Counties	London	Premium heat + cool
South & South West	Bristol	Efficiency, sustainability
Midlands	B'ham	Affordable upgrade
North West	M'chester	Value, reliability
Yorkshire & North East	Leeds	Trusted local engineers
Scotland*	Glasgow	Heating performance

*Home Energy Scotland grants (BUS is England & Wales). National marketing centre of excellence + regional pods; **each region a P&L.**

5 AGENTIC ORG: SG&A AS SOFTWARE

FUNCTION	AGENTS RUN	HUMANS OWN
Growth	Paid, SEO and local pages per brand; creative variants; CRO tests	Budget, brand, guardrails
Sales	Address-to-price quote, qualification, grant pre-screen, follow-up	Complex homes
Design	Self-survey, heat-loss pre-calc, sizing, job pack	MCS-competent sign-off
Fulfilment	Installer matching, job offers, POs, delivery, evidence capture	Partners, QA audit
Finance	Invoicing, payouts, BUS claims, reconciliation	Controls, audit
Aftercare	Comms, service reminders, reviews, referrals	Complaints

Target: <15 central FTE running 6 brands at ~3,600 installs/yr. Humans handle exceptions and regulated decisions; agents do the volume.

FULFILMENT PROGRAMME

- Verified certs, insurance and coverage; a **fixed rate card** per package, with priced variations.
- A full job pack before acceptance: kit, photos, routes, electrics, fee. Kit arrives on time; **fast payment**.
- Quality scores, rework duty, retention holdback. Goal: **our job beats one they find themselves.**
- **Partners and Dang It's Hot crews take jobs from the same platform**, so cost and quality are benchmarked like for like.

6 UNIT ECONOMICS (ILLUSTRATIVE)

PER AIR-TO-AIR INSTALL, EX-VAT	£	%
Net price (incl. £2.5k BUS grant; customer pays ~£2k)	4,500	100
Equipment & materials (group procurement)	(1,400)	31
Installer fee (partner rate card or own crew)	(1,100)	24
Customer acquisition cost	(450)	10
Warranty / callback reserve	(150)	3
Payments, finance, survey, other	(150)	3
Contribution per install	**1,250**	**28**

- **Recurring layer:** service plan (£12/mo target, 35% attach), referrals, later upgrades.
- **Levers:** CAC via local proof; kit via group buying; installer cost via productivity, not squeezed rates.

Key risk: site complexity pushes cost above quote. Mitigated by remote survey, fixed package scope and priced variations.

7 SCALE PATH & VALUE

STEADY STATE (ILLUSTRATIVE)	1 REGION	6 REGIONS
Installs / yr (50 / mo / region)	600	3,600
Revenue	£2.7m	£16.2m
Contribution (28%)	£0.75m	£4.5m
Central SG&A (agentic, mostly fixed)	(£0.9m)	(£1.5m)
EBITDA	**(£0.15m)**	**£3.0m · 19%**

EBITDA	6× EV	10× EV
£3m (6 regions, air-to-air)	£18m	£30m
£5m	£30m	£50m
£10m (+ air-to-water, adjacencies)	£60m	£100m

- **Two businesses in one.** Our own brands prove the OS, which can later be licensed to third-party installers. Precedent: Octopus spun out **Kraken at $8.65bn** (Dec 2025).
- **Natural acquirers:** HomeServe / BOXT (Brookfield), Centrica / British Gas, Octopus, E.ON, EDF, OVO, PE home-services platforms. They'd be buying a **lower-SG&A acquisition and fulfilment engine**, not just EBITDA.

8 NEXT SIX MONTHS: PROVE THE MACHINE

Build	Multi-brand, multi-installer OS. First partner installers signed; Dang It's Hot operating.
Launch	First regional brands live; demand, pricing and channel tests.
Prove	Partner vs owned economics; sourcing and training pilots; regional rollout decision.

What we'll prove: CAC and conversion by region · **≥20% contribution after CAC** · partner vs owned cost per install · ≥95% with no major rework.

RISKS → MITIGANTS

Liability	As principal we carry Consumer Rights Act exposure for subcontracted work. Evidence capture, holdbacks, back-to-back warranties, insurance.
MCS / BUS	Start via an MCS umbrella scheme; own certification later.
CAC	Regional vs national A/B tests, EPC-targeted mail, referrals.
Policy	Air-to-air also sells on comfort; BUS budget is set to 2029/30.
Fragmentation	One OS, shared SEO infrastructure; a brand launches only once installer capacity exists.
Owned ops	Kept at learning scale; scaled only where they beat partners on cost and quality.
